We need to build the voice of the gas industry as we look towards the future, which is really positive. We are growing again, particularly in the residential sector. What it suggests to me is that we have to continue to engage with customers in a much the same way as they do now. The main point is look at how far we've come in the last few years. The LPG industry has been quite fast, because year on year the sales have been quite good. We are growing strongly and it is hugely encouraging to see that. Gas is the lower carbon option and would be used in new home builds, in my view. We think if they make a thoughtful choice – we think if they do, they will choose gas. Gas is cleaner than other fossil fuels and is widely available. It's not hard to see why because LPG is a transportable fuel that fits well with supply and/or central heating. Gas fired water heaters for hot water supply and/or central heating. The LPGA can be contacted by telephone (04) 914 1765, fax (04) 914 1766, or mail PO Box 1776, 6140, Wellington.
