

DECEMBER 2020 EDITION

Welcome to the Gasline Newsletter

Published monthly by LPG and Gas Associations of New Zealand

Gasline is published regularly as part of the industry's efforts to encourage the direct use of natural gas and LPG into households and small businesses.

Using natural gas and LPG as a direct energy source offers numerous cost, environmental and energy efficiency benefits. Gas New Zealand hopes to educate consumers and policy makers about the many advantages of making wider use of this strategic energy asset.

Unlocking gas cleantech's economic and environmental potential

Meeting the energy needs of the world's expanding population sustainably, while fuelling economic growth and prosperity is one of the greatest challenges of our time.

Industry leaders collaborate to solve global energy challenges

Beca, EECA, Firstgas Group and Fonterra are backing a study to assess the potential of raw biogas by treating it so it becomes a possible substitute for natural gas.

Is RNG a California-only fuel?

There is a growing interest in renewable natural gas by fleets across a range of sectors due to its ability to seamlessly replace conventional natural gas.

Sourced from organic waste streams like green waste and livestock manure, RNG is made up of captured methane that would otherwise escape into the environment.

Clean energy innovation: fact or fantasy?

The International Energy Agency's *Special Clean Energy Innovation report*, released July 2, warns that the amount of new technology needed to meet the net-zero target in 2050 is virtually a fantasy.

IEA Executive Director, Fatih Birol, said there is a "stark disconnect today between the climate goals that governments and companies have set for themselves and the current state of affordable and reliable energy technologies that can realise these goals."

The report stated they were insufficient on their own to bring emissions to net-zero by 2050 without jeopardising energy security.
