

JANUARY 2019 EDITION

Welcome to the
Gasline Newsletter

Published monthly by LPG and
Gas Associations of New Zealand

Gasline is published regularly as part of the industry's efforts to encourage the direct use of natural gas and LPG into households and small businesses.

Using natural gas and LPG as a direct energy source offers numerous cost, environmental and energy efficiency benefits. Gas New Zealand hopes to educate consumers and policy makers about the many advantages of making wider use of this strategic energy asset.

\$30,000 scholarship to help industry players increase gas knowledge

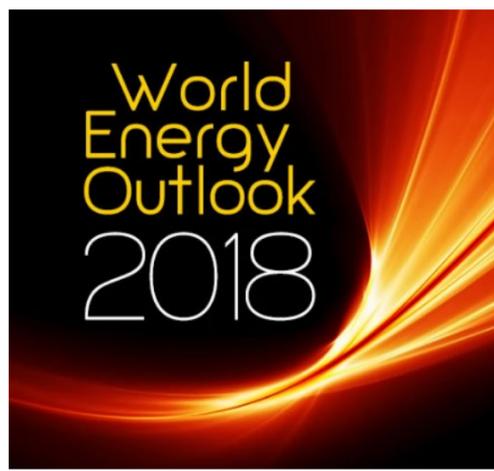

Each year, the Kennedy Educational Scholarship Trust looks to honour its industry pioneers by offering \$30,000 worth of scholarships.

This year will be no different as applicants are now being sought for the Scholarship – a lasting memorial to the Kennedy family's innovating efforts in New Zealand's gas industry.

With a maximum of \$10,000 for any individual, the scholarship provides grants for study, research and experience that benefits both the recipients and the wider gas industry.

Gas to overtake coal in energy mix by 2030, new report says

Natural gas is set to overtake coal as the second-largest fuel in the global energy mix by 2030, says a Paris-based intergovernmental organisation.

In its [World Energy Outlook 2018](#), the International Energy Agency details global energy trends and what possible impact they will have on supply and demand, carbon emissions, air pollution, and energy access.

The recent publication's scenario-based analysis outlines different possible futures for the energy system across all fuels and technologies.

One of its predictions sees industrial consumers making the largest contribution to a 45 per cent increase in worldwide gas use.

New import capabilities a critical piece to security of supply

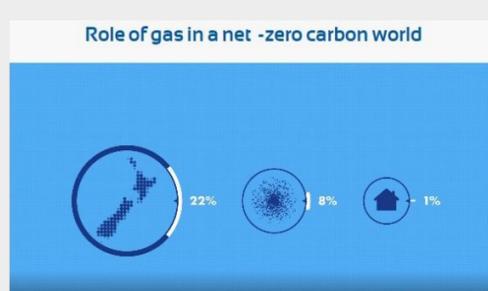

Liquigas' facilities at Port Taranaki are now capable of receiving emergency imports of LPG by tankship, providing an additional layer of security of supply.

It follows 24-month's preparation from initiation, funding support, design and project management through to the successful completion and commissioning of the facility.

New video illustrates gas' role in a net-zero carbon world

Explaining gas' role to help New Zealand transition to a net-zero carbon economy by 2050 has now been illustrated in a video.

Last year's Productivity Commission's analysis to identify the country's options to reduce its domestic greenhouse gas emissions through a transition to a low-emissions economy, showed that gas will still have a role to play.

UK Carbon Capture Utilisation and Storage Project progresses thanks to new partnership

The global Carbon Capture Utilisation and Storage (CCUS) industry has been given a major boost thanks to the United Kingdom's first commercial full-chain CCUS project in Teesside.

The Oil and Gas Climate Initiative Climate Investments announced that it has entered into a strategic partnership with BP, ENI, Equinor, Occidental Petroleum, Shell and Total to progress the Clean Gas Project.
